

ELECTIVE MEDICAL AND DENTAL PROCEDURES / TREATMENTS / THERAPIES

Follow all guidelines recommended for **ALL BUSINESSES** and **additionally**:

- **Temperature checks:** Medical Practitioners should consider use of a touchless infrared thermometer to check the temperature of employees each day and of each client who enters the clinic.
- **Screening questions:** Ask each client entering the clinic the following questions: Have you had a cough? Have you had a fever? Have you been around anyone exhibiting these symptoms within the last 14 days? Are you living with anyone who is sick or quarantined?
- **Limit people in clinic:** Clinic should consider seeing clients by appointment only. Clinics should consider telephonic or online scheduling. Limit the number of people in the waiting area of the clinic waiting room.
- **Maintain social distancing:** Spacing between people in the clinic should be at least 6 ft apart at all times. Clinics should consider additional spacing between booths, divider shields, and/or alternate work schedules.
- **Use of Personal Protective Equipment and best practices:** Employees will be required to wear masks at all times. Clinics may want to consider providing masks to clients.
- **Disinfection:** All clinics should be thoroughly cleaned and disinfected prior to reopening. Disinfect all surfaces, tools and linens, even if they were cleaned before the clinic was closed. Clinics should maintain regular disinfection of all tools, workstations, treatment rooms and restrooms. Additionally, clinics should remove all unnecessary items (magazines, newspapers, service menus and any other unnecessary paper products/decor).
- **Administration:** Employees who are sick will be expected to stay home.
- **Follow appropriate industry standards and guidelines.**
